SEMANTIC SEARCH TEST HANDBOOK

Fictional sample document for testing CampusFind

IMPORTANT: This document is fictional and is not an official policy of SRM or any other institution. It is designed to test whether a semantic search application can find relevant information from natural-language questions.

Contents

1. Attendance and Academic Participation
2. Leave and Absence Requests
3. Semester Examinations
4. Hostel and Residential Life
5. Campus Recruitment and Placements
6. Library Services
7. IT Help Desk and Wi-Fi
8. Student Project Funding

1. Attendance and Academic Participation

Students are expected to participate regularly in lectures, laboratories, tutorials, and other scheduled academic activities. Attendance requirements may differ by programme, course, or academic regulation. Students must consult the official academic regulations for the applicable minimum attendance threshold rather than relying on this fictional handbook.

If a student notices an error in an attendance record, the recommended demonstration procedure is to first check the course portal, collect relevant supporting information, and contact the course instructor or academic office. Attendance should be reviewed throughout the semester, not only immediately before examinations.

Example question this section should help answer: “What should I do if my attendance percentage seems incorrect?”

2. Leave and Absence Requests

When a student cannot attend classes because of illness, a family emergency, or another significant reason, the student should follow the institution's formal absence or leave procedure. Depending on the institution, this may involve submitting a request through a student portal, notifying a faculty member, and providing supporting documents. The student should check the official rules for deadlines and approval requirements.

An approved leave request does not automatically guarantee that attendance requirements, assignment deadlines, or examination rules are waived. Students should separately clarify missed coursework and any required make-up activities with the relevant faculty or office.

Example question this section should help answer: “I was sick and missed classes. How do I request leave and catch up?”

3. Semester Examinations

Before a semester examination, students should verify the published timetable, course code, examination venue, reporting time, and permitted materials. If two examinations appear to overlap or a timetable entry seems incorrect, the student should contact the examination office promptly and retain a copy of the published schedule.

If a student misses an examination because of an emergency, the student should contact the appropriate academic or examination office as soon as possible. Any consideration of a supplementary examination, deferred assessment, or other remedy depends on the institution's official regulations and documented approval process.

Example question this section should help answer: “Who should I contact if my exam timetable has a clash?”

4. Hostel and Residential Life

Residential facilities may provide accommodation, dining services, maintenance reporting, visitor procedures, and shared study spaces. Residents should use the designated hostel or residence office to ask about room allocation, repairs, meal arrangements, or residential rules. Emergency and after-hours contact details should be taken from the official residence noticeboard or institutional website.

For a maintenance issue, a useful report includes the room or area, a short description of the problem, when it began, and whether it affects safety. Students should not assume that a general academic office handles residential maintenance requests.

Example question this section should help answer: “Where should I report a broken light or plumbing problem in my hostel?”

5. Campus Recruitment and Placements

Students preparing for campus recruitment should regularly review official placement announcements, eligibility criteria, application deadlines, and job descriptions. A role may specify a graduating batch, degree, academic threshold, location, required skills, or restrictions on applying to multiple positions. Students should verify each condition against the current announcement.

A practical preparation workflow is to update the resume, check the role's technical requirements, practise relevant problem-solving and interview questions, and submit the application before the deadline. Students should rely on the placement office's official communication for changes to assessment schedules or hiring instructions.

Example question this section should help answer: “How can I prepare for a campus hiring process and check whether I am eligible?”

6. Library Services

The library may provide book lending, reading areas, digital resources, and access to academic databases. Students should check the library catalogue for availability and consult the library desk for borrowing limits, renewal rules, return dates, or fines. Access to electronic journals may require institutional authentication.

If a requested book is unavailable, students can ask whether another copy, an electronic edition, or an inter-library request is possible. Current opening hours and service conditions should be confirmed through official library information.

7. IT Help Desk and Wi-Fi

Students experiencing campus Wi-Fi or learning-portal problems should first check whether the device is connected to the correct network and whether the issue affects other websites or only one service. They can then record the error message, device type, approximate time, and location before contacting the institutional IT help desk.

Students should never share passwords or one-time verification codes in a support request. A support team may ask for a student identifier through an approved channel, but should not need the user's password. For account access problems, use the institution's official password-reset process.

Example question this section should help answer: “My laptop cannot connect to campus Wi-Fi. What details should I give IT support?”

8. Student Project Funding

Some institutions offer small grants, equipment loans, laboratory access, or faculty mentoring for student projects. Students interested in funding should prepare a short proposal describing the problem, intended outcome, materials or budget required, timeline, and supervising faculty member. Availability and selection criteria depend on the specific institution and funding programme.

Before purchasing materials, students should confirm whether prior approval is required, what expenses are eligible, how receipts must be submitted, and whether unused funds must be returned. A project proposal should not assume that funding is guaranteed.

Example question this section should help answer: “What should I include when applying for financial support for a student project?”

End of fictional test handbook. All rules and procedures above are generic examples for software testing only.
